# ANCHOR SMARTER

## EXPERT ADVICE FOR A SEAMLESS TRIP

### 1 Choose the Right Location

- ➔ **Avoid hazards:** Stay clear of rocks, reefs, or strong currents.
- ➔ **Sheltered area:** Anchor in a location protected from wind and waves.
- ➔ **Adequate depth:** Ensure the water is deep enough but not too deep for your anchor line.

### 2 Use the Correct Windlass and Anchor

- ➔ **Anchor type:** Choose an anchor suited to the seabed (Sandy bottoms, plow for sandy areas)
- ➔ **Rope Length:** Use a scope ratio of 5:1 to 7:1 (Ej: If you're in 10 feet of water, you should let out 70 feet of line.)

### 3 Secure the Anchor Line

After dropping the anchor, reverse your boat to dig it in. Pay attention to how the anchor holds. Once it feels secure, mark the anchor position on your GPS.
